ACCU-LABS 836-1 ACCU-LABS 837-2 TARNISH GUARD

ACCU-LABS 836-1 and ACCU-LABS 837-2 TARNISH GUARD is a process developed to prevent tarnish from forming on gold, silver, brass, and imitation rhodium and will protect it from discoloration due to oxidation. TARNISH GUARD is a hard durable finish applied with an electroplating process and is ideally suited for applications in the jewelry, electronics, and hollow ware industries where tarnish is a problem. In many cases TARNISH GUARD can be used instead of lacquer.

TARNISH GUARD is a two (2) step operation. ACCU-LABS 836-1 and ACCU-LABS 837-2 are used at room temperature. The first stage is electrolytic. The second stage is a soak sealer.

OPERATING GUIDELINES

Stage 1

Concentration: ACCU-LABS 836-1 30-35% by vol w/water

Tank: Tank with stainless steel anodes or stainless

steel tank used as the anode.

Voltage: 4-6 volts

Electrodes: Stainless Steel

Time of Immersion: 1 minute Temperature: Ambient

Water rinse - well - in an overflow tank preferably.

STAGE 2

Concentration: ACCU-LABS 837-2 30-35% by vol w/water

Tank: Mild steel, polyethylene, or stainless steel.

Time of Immersion: 1 minute

Temperature: Room - no current necessary.

Water rinse and dry thoroughly.

Separate rinse tanks must be used for TARNISH GUARD. The rinses must not be contaminated with any other solution.

Solution can be replenished by adding small amounts of TARNISH GUARD concentrate to the appropriate baths to compensate for drag out.

SAFETY

Always wear eye protection and personal protective gear when handling or working with this product. Read MSDS prior to use.
